**RODENTICIDE PASTE**

ACTIVE CONSTITUENT: 0.05 g/kg DIFENACOUM

**SOREX**  
INTERNATIONAL

APVMA  
APPROVED  
LABEL

READY TO USE PALATABLE BAIT FOR THE CONTROL OF ROOF RATS,  
NORWAY RATS AND MICE, including those resistant to other anticoagulants.  
FOR USE IN AND AROUND BUILDINGS, including industrial, commercial,  
agricultural, public services and domestic structures.

**A PROFESSIONAL PEST CONTROL PRODUCT**

LABL01089-V1

Manufactured by: Sorex Limited, St Michael's Industrial Estate, Widnes, Cheshire, England WA8 8TJ. Marketed by Sorex International, 31 Dover Street, Red Hill, QLD 4059. Telephone: 0412 251016.

<b>File name:</b>	<b>61910_44073_5KG_label_MPL_V2</b>
<b>Dimensions:</b>	<b>158 x 200mm</b>
<b>Scale:</b>	<b>90% ON A4</b>
<b>Date:</b>	<b>9th April 2009</b>

## DIRECTIONS FOR USE

### RESTRAINTS

DO NOT place baits in the open unless in bait stations.

DO NOT place baits in locations accessible to children and pets.

DO NOT remove bait from paper wrapping; rats & mice will chew through the wrapping to consume the bait.

PEST	SITUATION	RATE	CRITICAL COMMENTS
Mice	For use in and around (within 2 metres) industrial, commercial, public services, domestic and agricultural buildings (machinery sheds etc).	Use 1 or 2 baits per bait point	Explore the site and locate runs, nests, droppings and signs of damage. Eliminate as far as practical, all alternative food sources. Place bait points wherever droppings, damage or other signs of activity are seen. As mice are sporadic feeders use many bait points, not more than 3m apart.
Roof Rat ( <i>Rattus rattus</i> ) Norway Rat ( <i>Rattus norvegicus</i> )		Use up to 10 baits per bait point	Explore the site and locate runs, burrows, droppings and signs of damage. Eliminate as far as practical, all alternative food sources. Place a number of bait points in dry locations throughout the infested area, on runs, in burrows and where droppings are seen, but not more than 9m apart. Use weather resistant bait stations when using bait outdoors.

**General information and baiting strategy for rats and mice:** Eliminate as far as practicable all other food sources. Always place bait where it is inaccessible to children, animals and birds. Protect and cover bait. When using outdoors, use weather resistant bait stations. It is recommended that lockable, securable, weather resistant bait stations such as Roguard be used where possible. Alternatively, place bait in suitable containers or use weather resistant bait stations constructed from drainpipes or boxes. Try not to touch the bait as this may deter mice and rats from eating it. Do not place bait where food, feed or water could become contaminated.

Place baits only in situations where there is no ready access to occupants of the buildings.

Record the number and locations of bait stations for the purpose of replacement and later removal. Inspect baits frequently, particularly in the first ten days. Replace eaten bait. If bait is completely consumed, the quantity should be increased. Continue replenishing baits until they are left untouched. Baiting for at least 2 weeks will be necessary to reduce rat/mouse numbers. Two or more feeds are required to produce a delayed mortality. Most deaths occur 4 to 10 days after consumption of bait, but deaths may occur for up to 2 weeks. Following treatment remove all remains of bait and bait containers and look for and collect dead rats or mice. Burn or bury carcasses. Do not place in refuse bins. DO NOT let cats, dogs and non target animals eat poisoned mice and rats. While handling remaining bait material/animal carcasses, wear rubber gloves.

## NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

### GENERAL INSTRUCTIONS

Sorex<sup>®</sup> Pro Rodenticide Paste is a highly palatable cereal based all purpose rodenticide based on the advanced anticoagulant, difenacoum, which is equally effective against rats and mice, including strains resistant to some other anticoagulants. In some circumstances more than one feed may be required to produce mortality that generally occurs 4-10 days after consuming the bait.

Sorex<sup>®</sup> Pro Rodenticide Paste contains Bitrex<sup>®</sup> (a human taste deterrent) to help prevent accidental human consumption.

### PROTECTION OF LIVESTOCK, WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

The bait is hazardous to pigs, cats, dogs, poultry, birds, and wildlife and care should be exercised in its use. DO NOT place baits in locations that are accessible to domestic animals, livestock, birds or other animals. DO NOT contaminate dams, waterways and drains with bait or its used containers. DO NOT use this product to control native animals. The product is restricted to use in and around buildings (within 2 metres), structures or within enclosed spaces e.g. drains. When using outdoors, use weather resistant bait stations. In areas where possums and other non-target animals frequent, baits should be secured inside proper bait stations or bait stations constructed from drainpipes or boxes.

### STORAGE AND DISPOSAL

Store in original container, tightly closed, in a safe place. Triple or preferably pressure rinse containers before disposal. Dispose of rinsings and unused or untaken bait in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit. Empty containers and product should not be burnt. Search for dead mice and rats - burn or bury them; do not place in refuse bins or rubbish tips. Inspect all bait stations regularly and ensure baits are removed when rodent activity has ceased. Containers that have held bait should not be used for any other purpose.

### SAFETY DIRECTIONS

Poisonous if swallowed. Repeated minor exposure may have a cumulative poisoning effect. Do not inhale dust. Vitamin K1 (phytomenadione) is antidotal. Wash hands after use.

### FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone 13 11 26. Vitamin K1 (phytomenadione) is antidotal.

### MATERIAL SAFETY DATA SHEET

Additional information is listed in the Material Safety Data Sheet.

### NOTE TO PHYSICIANS AND VETERINARIANS

Difenacoum, the active constituent of Sorex<sup>®</sup> Pro Rodenticide Paste, is a long lasting anticoagulant chemical, which if ingested by humans, domestic animals or pets, can reduce the clotting power of the blood and haemorrhage may result. Vitamin K1 (phytomenadione) should be administered urgently by medical, appropriate para-medical personnel or veterinarians. If administered intravenously the injection must be given slowly.

### MANUFACTURER'S WARRANTY AND EXCLUSION OF LIABILITY

This product as supplied is of a high grade and believed to be suitable for any purpose for which it is expressly recommended and must be used in accordance with the Directions for Use given on the label. No responsibility is accepted in respect of the product save those non-excludable conditions implied by any Federal and State legislation or law of a Territory.
